

Week 9 Meeting

10/29/18

Team Leader: Ahmed

Other Team Members: Katayi, Nur, Chufu, Tam, YJ

Advisor: Dr. Ajarapu

Safety Moment: How to Reset a CCT Breaker

- Once this happens, do the following:
 - Turn off the light switches and unplug appliances in the room that has lost power.
 - Find your circuit breaker box and open the cover.
 - Locate the tripped breaker.
 - The tripped circuit breaker will be in the "off" position or in a middle position between "on" and "off."
 - Reset the breaker by moving it to the full "off" position and then back to "on."
- Safety tips:

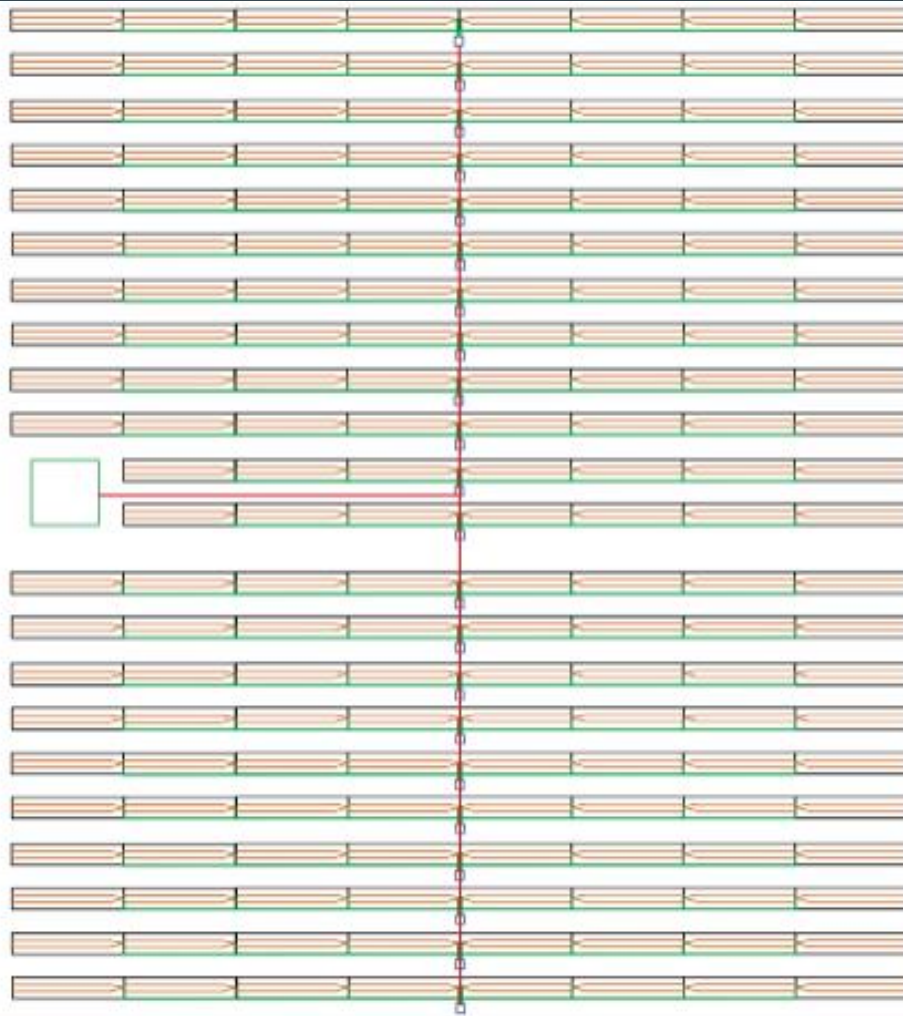

Topics

- Array Wiring Diagram
- Conductor Sizing and Type
- Collector AutoCAD and Parameters Calculation
- Feeder Drawing

Wiring And Final Array Layout

- Using the 6x6 layout
- ILR is 1.29

Conductor Sizing

| CBs 1-10, 13-22 | | | | | |
|---------------------|--------|--------|-------------|----------|-----------|
| Conductors | Isc(A) | IMP(A) | Type | Material | AWG |
| String (Harness) | 9.44 | 14.75 | free air | Copper | 12 |
| Rack to CB (Jumper) | 18.88 | 118 | free air | Copper | 2/0 |
| CB to Inverter | 75.52 | 236 | Underground | Copper | 400 kcmil |

| CBs 11 and 12 | | | | | |
|--|--------|--------|-------------|----------|-----------|
| Conductors | Isc(A) | IMP(A) | Type | Material | AWG |
| String (Harness) | 9.44 | 14.75 | Free Air | Copper | 12 |
| Rack to CB (Jumper) | 18.88 | 118 | Free Air | Copper | 2/0 * |
| CB to Inverter (Feeder) | 66.08 | 206.5 | Underground | Copper | 300 kcmil |
| NOTE: * Input racks 1 to 3 have a wire size of 1 AWG | | | | | |

Collector AutoCAD and Parameters Calculation

Parameters Calculation:

Transformer rating:

Max current of the inverter = 3000 A

Rated output voltage = 357 V

Transformer rating = $(3000 * 357 * 1.732) = 1854 \text{ KVA}$

Eaton 1666 KVA inverter output is 1831 KVA

Based on the transformer parameters:

1831 KVA KNAN, 65 celsius

34.5 KV - 357 V

3 phase, 5.75 %

Single inverter skid output current:

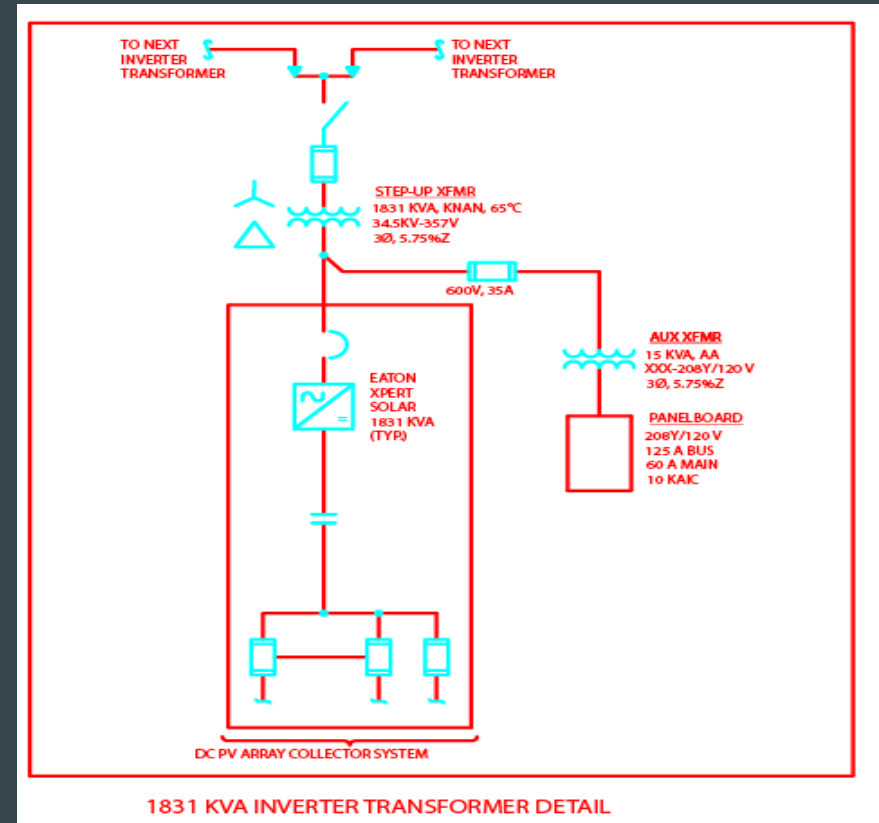

$I = 1831 \text{ KVA} / (34.5 \text{ KV} * 1.732) = 30.64 \text{ A}$

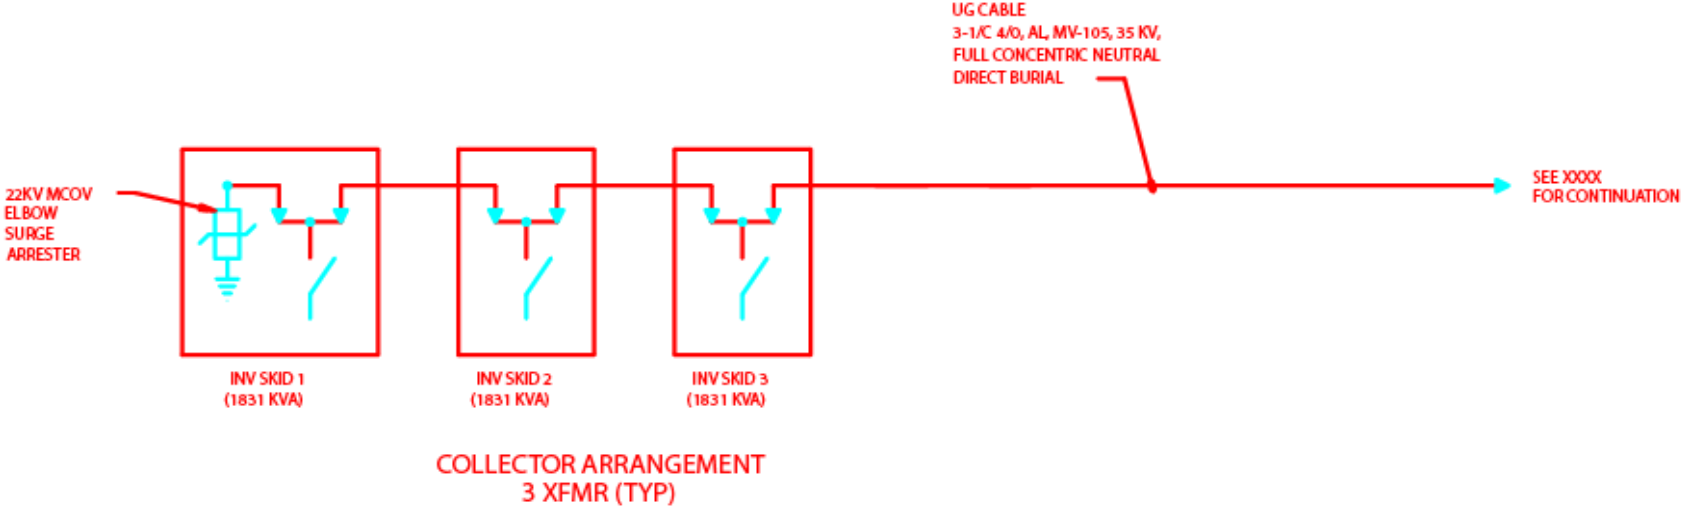

Collector AutoCAD and Parameters Calculation

Single Skid Parametres:

- 22 CB serve as input to 1666 KW Eaton Inverter
- Inverter output 1831 KVA will be matched with 1831 step-up transformer
- The output of transformer will be collected with 8 AWG copper conductor
- Another collector with 1 AWG size will collect and combine all the current and deliver it to the feeder.

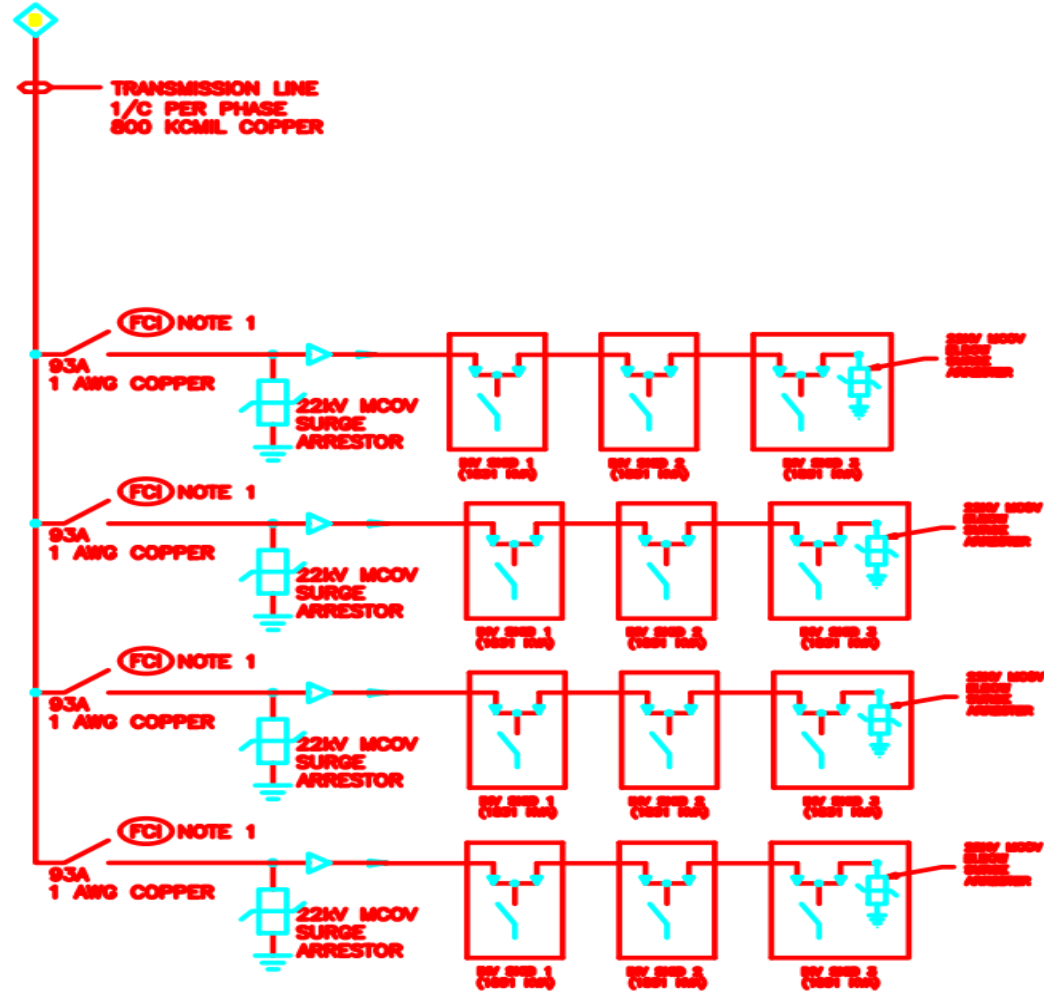

Collector Arrangement

Single Feeder layout

CIRCUIT B2-12
DWG NO. X00X
